

Nuncius Cœlestis.

OR,

URANIA'S MESSENGER.

BEING

A Brief Description and Survey of the Year  
of Humane Redemption. 1677.

Unto which is Numbred from years  
The Creation. { By the Oriental and Greek Christians 7188  
By the Jews, Hebrews, and later Rabins 5437.  
But According to Sacred Writ 5626

Being the first from the Bissextile or Leap-Year.

And from { Constitution of the Kalender by Julius Cesar. 1720  
the { Reformation thereof by Pope Gregory 95

Wherein is contained (besides the State of the Year  
the Solar Ingresses, various Configurations, Eclipses, Con-  
junctions, and Diurnal Motions of the Planets, with the Rising  
Setting and Southing of the Moon, according to the  
method of Mr. Vincent wing. Also an account of such  
Eclipses that shall happen this year, together with useful Ta-  
bles, and all other Furniture that may conduce to the Com-  
pleating such a Work. Accommodated to the Meridian of Lon-  
don, where the Pole Arctick is Elevated above the Horizon  
51 degr. 32 m. and without sensible Error may serve for any  
part of Great Britain.

To which is added a True Description of the effects of the  
Perseus and Stars

By J. J. Student in the Mathematicks and Astrology.

Dixit autem Deus: Fiat Luminaria in Firmamento cali &  
dividant diem ac Noctem, & sint in signa & tempora, & Dies  
& Annos, Gen. 1. 14.

Full Moon 7 day, at 3 hours 34 min. in the morn.  
 Last quarter 13 day, at 6 hours 29 min. afternoon.  
 New Moon 21 day, at 10 hours 27 min. in the morning.  
 First quarter 29 day, at 1 hour 35 min. afternoon.

M.D.	Change of Air.	Prognostications and other Observations.
1	You may expect a very great alteration of the air	Now ſeveral crabs actions and matters fail to croſs and thwart the quiet and peace of Europe
2	about the 6, 7, 68, & 10 days,	Day 15 h. 22 m. long. Night 8 h. 38 m.
3	with cold wind and rain.	his End.
4		Day 15 h. 38 m. long. Night 8 h. 22 m.
5		The Conquering or brave Victorious Pole is now ſued to for Peace.
6	Good weather for ſeveral days	Excellent good news out of Poland and
7		Day 15 h. 56 m. long. Night 8 h. 4 m.
8	Enclining to rain.	Scotland, and ſome difficulties or differences between the Dutch and Us, reconciled.
9	Scarcely fair.	Day 16 h. 10 m. long. Night 7 h. 50 m.
10		Day 16 h. 16 m. long. Night 7 h. 44 m.
11	From hence a very pleaſant ſeaſon till the end of the month.	Some great and eminent Perſon meets with the Sword of Juſtice.
12		Day 16 h. 20 m. long. Night 5 h. 40 m.

This Month hath highest Sun, and longest days.  
The Summer enters as the day decays,  
That which sprung whilſt ſol to the Crab did riſe,  
Ripens the whilſt he unto the Balance ſtays.  
Phœbus and Jove's for Peace, but Mars for War,  
That's the ill nature of that fiery Star.

N.	Change of Air.	Prognostications and other Observations.
1		Ships against ships, beaks meeting beaks reform.
2		And run asleeve, the Air is driven round.
3	Fair and clear	With flying darts, which falling sh' acca hide.
4	till about	Then tawing forward, but yet far more wide.
5	the 7 day.	They make their horns engat the adverse fleet.
6		As when strong winds with tides repugnant.
7	Tempest, thun-	der, and
8	rain.	One way the Sea, the waves another go,
9		The Ships upon the farrow'd Ocean so,
10	Brave weather	Make different tracks and waves upon the
11		maine.
12	Souldry hor.	That Ours said up, the f'abatts down again.
13		They grappling fall into the crassest Laze,
14	Extraordinary	Nor there dur' their enemy forsake,
15	pleasant	But weakly try the Combat out, where he,
16	weather for	That conquer, can no long survive be,
17	several days	At whose engrappling, Nature's mantle took
18	Clouds and	A purple colour, and Neptune's Trident brog,
19	rain, wi h	Ther do their aimed, naval forces make
20	thunders,	The fury Sea, torn Go's themselves to quag,
21	lightnings,	And Neptune's fure, the first discolour'd stage
22	&c.	Of War, a S me of their once-fet rage.
23	About this	Men would have thought some ferriest mo'd
24	time rem-	from far,
25	pelitious	When winter's rage the Pines proud tops deth
26	weather.	bar.
27		Or that the sign'd Egean Cyclades,
28	line and plea-	Torn from their roots, had fluted on the Seas.
29	fine to the 2	Day 16 h. 6 m. long. Night 7 h. 54 m.
30	end of the 14	Day 15 h. 28 m. long. Night 8 h. 32 m.
31	month.	31 Day 14 h. 42 m. long. Night 9 h. 20 m.

The Grand *Configurations* which are now,  
Doth cause a stately *Celestial* bow.  
Some for to satissie a lewd desire  
Cut down an Oak, and yet let go a Bryar.  
A Tyrant is a Rod and Serpent too  
And brings wof: Plagues than *Egypt* ever knew.

September hath XXX Days.

I hope poor Europe sees her Error now,  
Feeling the smart of War, begins to bow  
Unto sweet peace that seems to court her so.  
I hope she's not so mad, to let her go,  
But take her Offer whilst it is in date,  
For fear she should repent, when 'tis too late.

# NOVEMBER 1971

Last quarter 7 day at 1 hour 11 min. afternoon.  
New Moon 14 day at 11 hours 16 min. at night.  
First quarter 21 day at 3 hours 24 min. afternoon.  
Full Moon 29 day at 4 hours 14 min. in the morn.

M.D.	Change of Air.	Prognostications and other Observations.
1		
2	Winds and clouds.	Day 8 h. 48 m. long. night 15 h. 12 m. Good news out of Scotland, Faction Spirits receive a check.
3		
4	Change of air.	
5	Pleasant air till about the 13th. day.	Day 8 h. 30 m. long. Night 15 h. 30 m. More troubles attend his Imperial Majesty in Hungary, by or from the Turkish power in a clandestine manner.
6		
7		
8		
9		
10		
11		
12	Clouds and cold air; rain, snow, or frost.	Day 8 h. 16 m. long, night 15 h. 44 m.
13	No eminent alteration till about the 21.	Several persons in Authority called to question for divers abuses; Let Justice take place.
14		
15		
16		
17		
18		
19		
20	On this day there is an <i>Aperis Portation</i> , sheving snow or sleet.	Day 8 h. 0 m. long, Night 16 h. 0 m. The French suffer by the Spaniard; but there are no endeavours wanting to promote a Peace, and probably it may ensue.
21		
22		
23		
24		
25	High winds and blustering weather conclude the month.	Day 7 h. 50 m. long, night 16 h. 10 m. The Weather this month is various, beginning well, but ending ill.
26		
27		
28		
29		
30		

# December hath XXXI. Days.

The year conclud's with Amity and Love,  
I hope and wish, the next no worse may prove.  
In this Month many are the good *Affects*,  
But you must wait a while for their effects.  
*My task is done, I now my leave will take,*  
*My ought's amiss, next year amends I'll make.*

ON the left hand Page, you have first *Poetical Observations* on each Month. The first Column contains the Days of the Month. The second, the Days of the Week. The third, the Saints Days, and Mutual Aspects. The fourth, the Moons Sign. The fifth, the Moons Age. The sixth, Full Sea at London-Bridge. The seventh Sun Rising. The eighth, Sun Setting. The ninth, the Aspects of the Moon to the Planets.

Where note ( m. ) stands for Morning, and ( a. ) for Afternoon.

On the Right-hand Page, you have first on the top of each Month, the Lunations. In the first Column, the Day of the Month. In the second, Change of Air, with more than ordinary care. In the third, General Observations, with the length of the Days and Nights. All being so plain and easie ( having the Titles prefix to each Column, what is therein contained ) that Examples are needless.

Signs of the Zodiac

- ♈ Aries Head and Face doth claim,
- ♉ Dull Taurus at the Throat doth aim.
- ♊ The Aimes are rul'd by Gemini,
- ♋ Cancer the Stomack doth supply.
- ♌ Leo doth rule the Back and Heart,
- ♍ The Belly is fair Virgo's part.
- ♎ The Reins and Loins are Libra's share.
- ♏ Whilst Scorpio keeps the Secret Ware.
- ♐ Sagittarius owne the Thighes,
- ♑ Swift Capricorn the Knees Supplies.
- ♒ Aquary Leggs and Shanks doth owne.
- ♓ Pisces must have the Feet, or none.

Obser-

# Astronomical and Astrological Observations for the Year 1677.

## Of the secret Operations and Effects of the Planets and Stars, upon Inferiour Bodies.

IS not the growth of Fame ( as *Horace* speaks very Naturally ) as secret and insensible as that of a Tree ? And are not our minds when we are Children rude and ignorant, yet by Education reduced to knowledge, though the progress we make therein ( or in any kind of learning ) be not computable every day and hour. But after a certain time both the corporeal growth of the Body is perceived ; and the progress which the mind hath made in learning and experience is manifest. Whence it appears that these things are subject to time, which is nothing but an insensible and indivisible progression ( as I may term it ) of minutes whose progress is the measure and number of all motion, so that what at first could not be perceived, is after a while as manifest as Noon-day. This is all the account can be given of the Stars, for the effects of the Stars and Planets are not perfectly perceived, though their motions and influences cease not, seeing they operate insensibly and constantly. And what time seems ( to us ) to bring forth is caused by and must be ascribed to their motions and configurations. The heat and light of the Sun which redeems us from so much darkness is generally acknowledged, but the Operations of the rest of the Planets are not perceived because they are not all equally hot, nor have that Majesty of light and their qualities differ, but are like Lamps which can neither cast forth any sensible heat nor shed such a light as can enlighten fully those places which they are set in. Moreover as the Sun being above the Earth, drives to and fro the Airy gasts whereby he heats all things, and by which means he dries some things and melts others, sometimes

C

constrains

# *Cirania's Spellenger, 1677.*

constrains and sometimes loosens, he drives away some things and draws others to him; so also the *Stars* and *Planets* by that Spirit which we call the Air do affect those humors whereof we consist by infusing their qualities into them according to their several natures, which being affected, there are caused those fights which afterwards move our minds and Spirits to think and do according to the nature of the *Star* affecting, and the humour affected; so that not only the constitutions of our Bodies follow those natures and affections, but also our very *Actions* have a representation of them, to which affections when reason becomes either a guide or an assistant, it comes to pass that *man* only can be called a *Rational Creature* who of all Creatures in the World hath the greatest correspondence and sympathy with *Heaven* and the *Stars*, which are placed therein.

## **A brief Chronological account of some things worthy Note since the Birth of Christ, to this present Year 1677.**

Since the Birth of Christ,  
Christ suffered upon the Cross,  
Rome Began by the Command of Nero,  
England first Received the Christ. Faith,  
Constant first Received the Christ. Faith,  
The Tower of London Built,  
Cambridge was made an University,  
The Darts first came into England,  
Piscatorial Ball Built,  
The Conquest of England by D. WILL. Con.  
Pauls Church in London Built,  
London Bridge Built with Stone,  
The first Mayor of London,  
The Order of the Garter Instituted,  
Guns were invented,  
Cockle first Invented in England,  
The Royal Exchange first Built,  
A Plague in London whereof dyed 30,354,  
The Gunpowder Treason, Nov. 5,  
A Plague in London whereof dyed 35,447,  
A great Plague in Cambridge,  
Earl of Straburgh beheaded,  
A great Fight at Edge-hill Oct. 23,  
Brewster Fight,  
Newbury last Fight Sept. 28,

Newbury second Fight,  
The fatal Battle at Newbury June the 14.  
The Bishop of Canterbury Beheaded,  
King Charles the I. was Murdered,  
Duke Hamilton Lord Caput, and Earl of Holland were Beheaded,  
Waller Fight, Sept. 3,  
Cromwell Dyed, Sept. 3,  
General Monk Marched to London,  
King Charles II. arrived in London, May 29,  
Maryline and the rest of the Virginians were Executed at Charing-cross,  
King Charles II. Crowned, April 23,  
King Charles II. Married,  
The first great Sea Fight with the Dutch,  
The great Plague in London whereof dyed 68,666, in that year in all 77,351,  
The great Plague in London on Sept. 2-3,  
The Duke of Alenmarle Dyed,  
London Retrailed,  
Since the English Fought the Dutch at Sea, under the Conduct of his Roy.  
at Highflyers Prince Rupert,  
Last Peace concluded with the Dutch.

This Table shews the Interest of any sum of Money from 1 s. to a 100 l. from a day to a year. And by the help of Addition you may compute the Interest of any sum whatsoever; and note that for the greater exactness the penny is divided into a 100 parts, so that 25 parts are a farthing, and 50 parts an halfpenny, and 75 parts 3 farthings, &c. *Examp. e.* The Interest of 100 l. for six months one week and one day, is thus found by the Table.

Interest of 100 l.

 03-27-34

Of the four Quarters of the Year, and first of the Spring.  
**E**quinoctium Vernalis, or the Spring Quarter, takes its beginning when Royal Sol enters the Equinoctial Sign *Aries*; which falls this Year *March* the 9. day 9. h. 27. min. afternoon, Equalizing both day and night all the World over (except under the *Poles*). This is the most pleasant season of all the Year, because all things now grow green and flourish, now the Chilified Roots of *Herbs* and Plants are quickened, and their vegetable life produced, the natural temper of this Quarter is generally hot and moist, but if it happen otherwise, 'tis unwholesome for mankind; the *Melancholy* constitution is now least afflicted with diseases, and the *Sanguine* most obnoxious thereunto, therefore let such persons endeavour to preserve their health in time. In the next place I shall present the Scheme of the Heavens at the Suns ingress into *Aries*, Calculated (as to the time thereof) from the *Rudolphin Tables* now Printed with my *clavis Astrologica Elimata*. 141. 45.

Judgment Astrological deduced from the Scheme of the Suns Ingress into the Equinoctial Sign *Aries*.

**I**N this *Vernal figure* we have the Celestial Sign *Scorpio* ascending, concerning which there hath lately been great dispute among Artists, and now 'tis come to this Result that *Scorpio* is not only a Sign of fallacy, but the most *Vicious* Sign of all the twelve, being some years since acknowledged to be so, by a Professor of *Astrology* amongst us, (that looks upon himself to be far better acquainted with the nature of celestial Influences than the rest of his Brethren;) Let the Gentleman enjoy his opinion, but for the future forbear further contests with any of them, and endeavour rather to repair his reputation in which he hath lately made so considerable a breach; as hath been sufficiently evinc'd in Print. But I proceed to my *Astrological Judgment* upon the Scheme (and therein for once shall imitate the part of a common *Prognosticator*) 1. I shall begin at the *Ascendant* or *First House*, which (in a *Revolutions Figure* of the World) signifies the *Common people* or general state of the *Country* or *Nation* for which 'twas set, and finding no *Planet* therein, but favourably beheld by the *Trine Aspects* of *Mars* and *Venus* (who also behold each other by a *Trine*) I therefore conclude the condition of the common people to be good and fortunate this year, and that they should live peaceably in the general and in moderate health and friendship one with another; But in regard *Scorpio* is upon the *Ascendant* (viz. *signum fastidii*) and *Mars* Lord thereof in *Cancer* disjunctly placed in his fall, this Judgment cannot fully take place, for some *Trachery* or unworthy *milition* Acts there will be more or less undoubtedly amongst persons of both Sex. 2. From the *Second House* and Lord thereof Judgment is usually drawn concerning the substance or support of a *Kingdom* or *Nation*, and in the Scheme finding the *Dragons Head* in the *Second* and the *Becevolent Planet Jupiter* Ruler in *Aquary* a humane Sign, also the *Moon* hasting to his *Trine*, this prenotes (or naturally signifies) the happy and prosperous condition of this *Kingdom*, viz. That the people thereof in general (and some neighbouring Nations) shall

shall not only enjoy *peace*, but *plenty* also, which is as much happiness as can reasonably be expected or desired, yet considering the Disposer of *Jupiter*, viz. *Saturn* beholds him by a *Quadrat Aspect* from *fixed signs* and the *Moon* in *Square* to *Mars* also, I conclude may persons will notwithstanding repine and torment themselves for some few accidental and inconsiderate losses which may casually happen unto them, but very rarely such as many totally ruine or undo them, and therefore I presume we shall not so frequently hear of the failing or breaking of so many (supposed able men) this Revolution as in some late years. 3. From the *Third House* or *Masson* of a *Figure*, *Astrologers* pronounce Judgment, of Brethren, Sisters, Inland-Journeys, Messengers, Letters, Neighbours, Removals, &c. And in this Scheme the *Tropical Sign Capricorn* is Ascending upon the Cusp of the *Third House*, and *Saturn* Lord thereof in *Taurus* in the *Seventh House* near the *Pleiades*; to which may be added the *Malignant Opposition* of *Mars* to the Cusp of the *Third*; these are arguments that not only many *Satyrical Epistles* or *Libels* may be written and dispersd, this year, but people will too frequently remove their Habitations to their prejudice and detriment, it also portends that their short and Inland-journeys may prove unsuccessful, and Neighbours and Relations should unhappily injure one another, though not considerably, for this Judgment is meliorated by the friendly *Sexile* of *Venus* to the Cusp of the *Third House*. 4. From the *Fourth House* (or *North Angle*) Judgment is taken concerning the period of all our actions, and many other things, as you may read at large in my *Clavis Astrologia Elimata* lately published (to which I refer the reader that delights in *Astrological Speculations*) Now finding *Jupiter* posited so near the Cusp of the *fourth* in good Aspect to the *Moon*, and *Venus* and *Mercury* in the *fourth* beholding the *Ascendant* by a friendly *Trine*. Hence I may rationally conclude that the general affairs of this year may end well, and such persons that are Masters of *Houses* or *Lands* or both should (for the most part) this year be very successful therein (unless they labour under some malevolent *Directions* in their *Nativities*) The honest laborious country man and Farmer may now expect very hopeful

Crops

Crops of Corn and other grain (unless strangely contradicted by some Superiour or Occult cause in Nature) and receive much benefit thereby, to recompence his great pains and industry, and generally the end of all just and honest indeavours should terminate happily to the great content and satisfaction of the Agents. 5. From the *Fifth House* Authors consider all kind of pleasures and delights, hence we judge the Condition of Children and all younger Relations, also of *Messengers*, *Agents*, *Embassadors*, &c. Now finding *Jupiter* and *Venus*, (both the fortunes) Ruling this *Manfon* (or part of Heaven) and the *Moon* applying to the *Trine* of *Jupiter*, also *Pisces* a fruitful sign upon the Cusp of the fifth, and *Venus* posited there in her own dignity of exaltation, these are notable arguments that give us great hopes that Women this year should be very fruitful and happy in Childbirth, the people in general will delight to take pleasure, and recreate themselves with all kind of honest pastime; now several welcom *Embassadors* arrive in our Nation, and able *Agents* are employed in publique affairs who bravely discharge their trust with much fidelity, to their exceeding commendation and honour, the position also promises great probability of a good Trade to most *Towns*, *Albhouses*, *Gaming-Houses*, &c. And in fine a most pleasant and delightful year to the people in general. 6. From the *Sixth House* we judge of the *Diseases* of the year, of small cattel, and of the fidelity or falsity of *Servants*, &c. And finding *Mars* Ruler of the *Sixth House* in *Cancer* in *Quartile* to the *Luminaries*, this portends dangerous diseases proceeding from choler and the corruption of *Blood*, probably *Surfeits*, *Feavours*, *Small Pox*, *Measles*, &c. But yet not more violent then in former years, nor such distempers which may non-plus the ordinary professor of *Physick*, or puzzle the learned and able Doctor, for *Mars* beholds *Venus*, and the *Ascendant* by a *Trine Aspect* and being posited in *Cancer* the watry *Trigon*, which is attributed to him for his *Triplicity*, he receives a far greater debility therein, and 'tis a Sign contrary to his own nature, and therefore he is there less powerful or able to inflict his evil influence upon

C 4

upon mortall—By what hath been said, small Cattel should thrive and increase moderately well, only sheep should be something subject to the Rot or some other disease Equivalent, and Servants should this year very rarely perform their duties with that justness as they ought, but will be more or less subject to extravagancy and idleness, &c. 7. From the *Seventh House* Judgment is drawn, concerning Marriages, Law Suits, publique Enmities, &c. Now the Position of *Saturn* therein with the *Pleiades*, and in Quartile to *Jupiter*, I must confess is no way favourable, but considering also that *Venus* (who is potent in the *Scheme*) doth dispose of *Saturn*, and she in *Trine* to *Mars* Lord of the Ascendant, this shews no danger of Opposition from a publique Enemy this year, but rather intimates (in Starry Dialect) that there are a discontented party that lie Dormant, but dare not vend their malice, or make publique opposition thereby to disturb or mole our flourishing *Island*, but rather menaces some place abroad, with some Insurrection or secret plot contriv'd against them; we may 'tis true have many tedious Law Suits, and other contentions arise amongst us, as also frequent Curtain Lectures or Nuptial Broils, high differences between men and their wives, chiefly arising from jealousy and other unhappy discontents, and therefore those Marriages that are celebrated this year, 'tis to be feared may not prove so favourable (many of them) as might be wished; as for *Thieves* and *Robbers* and such as frequently go upon the *Pad*, we may expect to hear of strange exploits acted by such desperate Agents, and they will assuredly receive their due reward by the hand of Justice. 8. From the *Eighth House* Judgment is deduced concerning Mortality, &c. *Mercury* is Ruler of the House of Death, and he very dejectedly placed in the fourth in his *Fall* and *Detrimint*, and *Retrograde* also; *Guido Bonatus* tells us if the *Lord* of the *Eighth* be strong and fortunate, there is no great danger of *Mortality*, but here on the contrary he is sufficiently weak and debilitated, and the *Dragons* Tail is also in the Eighth, and therefore there is the more danger of *Mortality*, or that a greater number of people should

should expire this year then ordinary, but this Judgment is something mitigated, in respect *Mercury* beholds both the *Ascendant* and Lord thereof by a *Trine Aspect*, yet let such as are concern'd in *Ligacies* or *Portions*, look well to their business lest they repent too late. 9. From the *Ninth House* of the *Scheme*, Judgment is taken concerning the Law, Religion, Long Voyages, &c. In the *Primal Figure* the *Moon* is Governess of the Ninth House, and applying to the *Trine* of *Jupiter* (as I have before intimated) but she is also in *Square* to *Mars* in the Ninth from Cardinal Signs, which shews prejudice and considerable damage to the Merchant in his adventures to Sea, but yet hopeful returns may nevertheless be expected because the fury of *Mars* is in part corrected by the *Trine Aspect* of *Venus* the lesser fortune, and both behold the *Ascendant* by a Benevolent *Trine* also; moreover *Mars* being Lord of the *Ascendant* and posited in the Ninth gives greater hopes, that notwithstanding some accidental injury or losses may be sustained, yet the returns and advantage thereby, shall far exceed the loss, which is some encouragement in the midst of dangers, and what is said in this case may be applied also to Ecclesiastical affairs. 10. The *Tenth House* hath signification of *Kings*, *Princes*, *Rulers*, &c. Royal Sol in this Revolution is chief Ruler of the *Mid-Heaven* or Angel of Honour, he is just entering his exaltation, and a Noble Royal Star Culminates (viz. *Cor Leonis*) These are arguments of much happiness, grandeur and splendor, that such persons (very aptly signified by the *Sea* who is *rex planetarum*) shall enjoy this year, to the honour of their Subjects, and the terror of their Enemies: 'tis true that *Mars* in the *Ninth House* (which is the Twelfth from the Tenth) is in *Square* to the *Sun*, and plainly signifies that even *Kings* and *Princes* have their private Enemies (and sometimes amongst choice of their own Subjects) as well as publique, but in regard *Mars* is weak and dejected, and the *Sun* so powerful, therefore such private Enemies will not attempt to spit their venom, but must of necessity remain quiet and dare not appear: lest the hand of Justice too suddenly

suddenly lay hold upon them. 11. From the *Eleventh House*, Judgment is deduced concerning the Treasure, Wealth of *Kings*, as also the hopes and assistance of a *Person* or *Nation*, &c. *Mercury* I acknowledg is weak and debilitated, he is Lord or Ruler of the *Eleventh House*, and is a proper significator of these matters or things, who of himself promiseth little or no assistance, but let it also be considered that *Mercury* and *Venus* apply to a *Conjunction*, the *Moon* is in the *Eleventh* disposed of by *Venus* and applyeth to the *Trine* of *Jupiter* who is in a fixed Sign near the *Fourth House*; whence it may rationally be gathered that upon all occasions there may be sufficient supplies both of treasure and assistance provided almost beyond expectation. 12. From the *Twelfth House* is discovered *Astrologically* the private enemies of a *Person* or *Nation*, and in our *Figure Venus* being Lady of the *Twelfth*, and in *Trine*, both to the *Ascendant* and Lord thereof, what need we then to fear the least prejudice, from such, when there doth not appear the least danger? And thus I have briefly run over the whole *Figure*, which may be acceptable to some, and rejected by others, as impertinent; but I look upon a *Revolitional Figure* of the *Suns Ingress* to be the same with a *Figure* of a *Nativity* for a year, and it ought therefore to be expounded after the same method, since man, who is not improperly compared to a little World (viz. *Microcosme*) is the *Epitome* of the great World (viz. *Macrocosme*).

Of Summer.

*Solstitium Aestivum*, or the Summer Quarter this year takes beginning with us, upon *Sunday June* the 10. at 24. min. past midnight, causing longest days to all people on this side the *Aequator*. This Quarter is naturally hot and dry, the *Phlegmatick* constitution is best in health now, but the *Choleric* the contrary.

Of

Of Autumn, or Harvest.

*Equinoctium Autumnale*, or the Autumnal Quarter begins this year upon *Wednesday, September* the 12. at 2. min. past 4. in the afternoon, making the days and nights equal as in the *Spring Quarter*. This season is by nature cold and dry, and therefore those of a *Sanguine* constitution are best in health, but *Melancholy* persons are very subject to diseases this Quarter, and therefore they ought to consult the learned and able *Physician* in time.

Of the Winter Quarter.

*Solstitium Hyemale*, or the Winter Quarter, begins upon *Thursday, December* the 11. at 29. min. after 3. in the morning thereby producing our longest day and shortest night; the natural temper of this Quarter is cold and moist, and at this season of the year, is *choleric* persons and youth do best enjoy their health, but ancient persons and those of *phlegmatick* constitutions are now very subject to be afflicted by the Malignancy of Diseases; proceeding from ill and vitious humours, which ought to be purged off the Spring following, if they intend to preserve themselves in health.

Of the Eclipses that will happen this present Year, 1677.

There are this Year four Eclipses of the *Luminaries*, viz. two of the *Sun*, and as many of the *Moon*; but only one Eclipse of the *Sun*, and some part of one of the *Moon* will be visible in our *Horizon*, if Clouds interpose not.

The first Eclipse of the *Sun* falls *May* the 21. and the middle time thereof at 27. min. past 10. in the morning, and will be visible to us if the Air be clear, it falls in 10. deg. of *Gemini*, the *Ascendant* of the famous City of *London*, (which I pray God preserve from future fires) *Proclus* tells us that an Eclipse of the *Sun* in the first decade of *Gemini*, imports or stirs up *Diffensions*, *Strifes*, and *Seditions* amongst *Clergymen* and all manner of *Mercenaries*.

chants and Mechanics, of every Order, deadly hatred, contempt of Laws, neglect of Piety and holy duties, with breach of Covenant do also follow. This Eclipse will be visible at St. Helena, St. Mary Madagafcar, St. Martins Mauritania, &c.

The second Eclipse of the Sun happens upon the 14. of November, and the middle time thereof at 15. min. past 11. at night, and therefore not visible to us, but it may be seen in China, Japan, South Sea, America, new Granada, St. Thomas, new Spain, &c.

The first Eclipse of the Moon falls on May the 7. the middle time thereof at 3 h. 34. in the morning. and some part thereof may be seen with us before Sun rising, it will be visible at Brissl, St. Lawrence, Poland, Island, new Spain, Norway, Cape of good Hope, Barbary, Friesland, north-America, &c.

The second Eclipse of the Moon falls October the 30. and the middle time thereof at 10 h. 55. min. not visible in our Hemisphere, but it may be seen in Magellania Island, new France, Florida, Cuba, East Sea, Malabar, the Caspian Sea, &c. *Eclipses Luminarium super civitates, provincias & Regna magis quam super privata Conditionis hominis aut titulum super Reges, Respicimus enim multitudinem. Cardan. Sig. 5. Aph. 45. i. e. Eclipses of the Luminaries have signification or operate by their influence more forcibly upon Cities, Provinces, and Kingdoms, then upon men of private condition, or even upon Kings, and Princes, for their effects have generally Relation or rather respect the multitude or many people.*

To find High water in most Coasts of England, &c. As also upon what points of the Compass it floweth in any of those Coasts.

First find what hour the Moon will be South by a Table for that purpose at the beginning of the Almanack, by entering with the day of the Month in the first left hand Column, and the Month at top, and in the angle of meeting you have the hour and minute of the Moons Southing, either in the morning or after-noon, and fo

so upon the first day of January you will find the Moons Southing at 6 h. 32. m. in the after-noon, and at that time you may truly conclude it is high water at Southampton, Quilborough, and Portsmouth, for there the South and North Moons makes high water.

But if you desire the time thereof in any other Coast about this Kingdom, then enter the ensuing Table with the name of the place, and see how many hours and minutes appertain thereunto under H. M. which if added to the time of the Moons Southing, you have the time of high water desired, and for the Readers further satisfaction, there is also added the points of the Compass, the Moon must be on to make a full Sea for any of those places in the Table.

Practical Physick, or five distinct Treatises of the most pre-dominate diseases of these times, the first of the Scurvy, the second of the Dropsy, the third of Feavours and Aguts of all sorts, the fourth of the French Pox, the fifth of the Gout. Wherein the Nature, Causes, Symptoms, various methods of Cure, and ways of preventing the said diseases are distinctly handled; written in Latin by the famous Dr. Dan. Sennertus, and now made English by H. Care Student in Physick and Astrology, and sold by William Ibbiswood at the Bell in Duck-Lane.

*An Example of the use of the Tyde-Table.*

**T**HE first day of January it is required to know full Sea at Gravesend: By the Table of the Moons Southing, I find as before, the Moon is South at 32. min. past 6. after-noon, then in the Tyde-Table against Gravesend, I find 1. h. 30. min. which added to the Moons Southing gives 8. h. 2. min. at night the time of High water or Full Sea at Gravesend, Romney, Ramblers, the like understand of any other; and here take notice that the Sea will flow more by one point of the Compass in the Spring-Tydes then in any of the Quarters of the Moon, which are called Neap-tydes in any River that hath any indraught, and is of some reasonable distance from the Sea, so likewise Winds, Land-Floods, the Latitude of the Moon or her Aspect to Venus in moist signs, or to Saturn or Mars in dry Signs, may anticipate or protract, increase or diminish; as sometimes has been seen when the Floor of Westminster-Hall hath been all over-flown.

*A short discourse of the Heavens, and Stars, and their Effects, &c.*

**T**HERE is in man a natural Covetousness of knowledge derived unto him from the Heavens, by the motion whereof men are begotten, and all things in their times and turns are generated and corrupted. For man when he is born can not immediately exercise those members which nature hath ordained for the defence of the Body, and the execution of his necessary and natural Actions; but they must expect perfection in time, that so they may be fitted for those offices they are ordained for, as may be said of the feet, the hands, the tongue; such is the consideration of those things which are necessary to the attaining of any Science, there is therefore some space of time required that the understanding which is subsequent to the mind, may first be informed; and the information of the understanding proceeds from the senses of the Body, for tasting discerns tastes, the sight

sight Colours, smelling Odours, and hearing Sounds, &c. Now the understanding represents matters to the mind, some as things of reason, and some as things only of conjecture; which though they are not certain and of necessary consequence, do seldom make custom a liar. The knowledge therefore of the Heavens and the Stars, is partly Rational and partly Conjectural; that part is Rational which is called Astronomy, because it is led by the knowledge and certainty of Motions, Times, and Numbers. That part also which is called Astrology, is partly Rational, because it recedes not far from Nature and Natural things, for when an Astrologer concludes that Saturn or Mars introduces a Pestilence, is there any more said then that by his motion he corrupts the humours of the Body and the Air, and so consequently infects the Blood and the whole constitution, from which infection, a Pestilence must naturally follow: And it is also partly conjectural, as when an Astrologer says that Mars portends War, for these inferior causes; especially those of any relation to men, are not always subject to the celestial causes, but are sometimes more powerful according as the Wills and Consultations of those which are to manage the War are altered by them, wherefore in some significations and predictions, reason bears the sway, in others Conjecture rather. It has also been observed that it naturally happens after the revolution of many years, something new shall be produced which afterward is obliterated through ancient time, and yet after this, comes to be known again: And thus it falls with the secrets of the Stars, which were first observed by an impulse more then humane, and yet perhaps there is more knowledge of them reserved to future Ages. Now when men by observation were well assured that the same motion of the Stars caused the same effects, and that many things present differed not from things past, and had the same reason, they knew to what motion, or to what Planet or Fixed Star to attribute the proper and certain signification; and as the Poets have given names to men according to their virtues and vices; so are the Signs and Stars called by divers, and yet proper

proper names to them, taken from living Creatures or other things which giveth the greatest signification of their properties, and which do as it were by some *Image* represent their operations, both in the constitution of Bodies, and disposition of the minds of men.
